EXERCISE - 2

Question

Execute and display the results of the following commands in Kali Linux Operating System:

1. less command
2. more command
3. vi command

Aim

To execute and display the results of the less, more, and vi commands in Kali Linux.

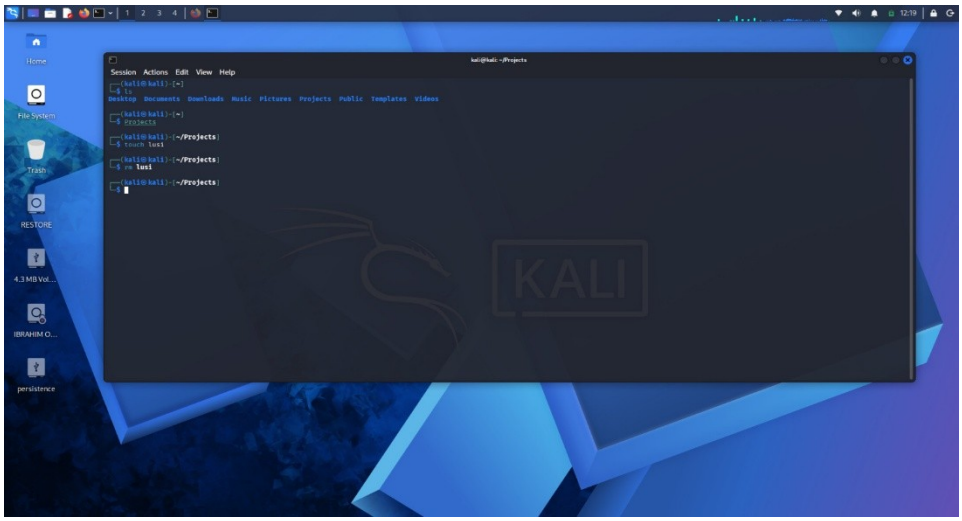

1. LESS COMMAND

Command:

less lusi

Use:

The less command is used to view the contents of a file one screen at a time, allowing backward and forward navigation. When used on a directory (as shown below), it reports that the target is a directory instead of a readable file.

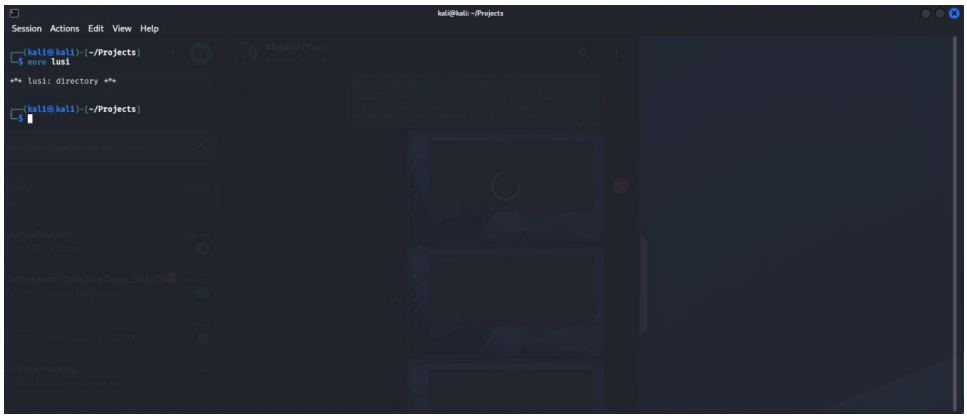

2. MORE COMMAND

Command:

more lusi

Use:

The more command is a simpler pager used to display file contents page by page. Like less, it reports when the given argument is a directory rather than a file.

3. VI COMMAND

Command:

vi lusi

Use:

vi is a command-line text editor. When pointed at a directory, vi's built-in Netrw plugin opens a directory listing/file browser instead of editing a single file, as seen in the screenshot below.
